STATISTICE SECOND SUMMARY

Agricultural Marketing Service, U.S.D.A.

U. S. DEPARTMENT OF AGRICULTURE
Washington, D. C.

SS-204

November 19, 1959

Crop Prospects Continue Favorable

Little or no change took place during October in the prospect for total crop production. Slightly improved estimates for cotton, sorghum, rice and sugar beets offset small reductions in corn and soybean prospects. Output of all crops Nov. I remained at 118, same as the all-time high reached last year and 8 index points above the 3-year 1956-58 average.

Total Farm Output, Record High

Index of total farm output, including livestock and products as well as crops, continued at re.ord high of 125. This compared with an index of 124 for 1958 and the 3-year average of 117 (for other output indexes, see table on page 4).

Moisture Plentiful for Fall Grains

Favorable soil moisture supplies in the Great Plains, Ohio River Valley and Pacific Northwest gave promise of even germination and satisfactory fall development of winter wheat, in spite of some planting delays and extensive reseeding in parts of the southern Plains.

An exceptionally wet October in the Southeast has limited fall seeding progress. Most Northern Great Plains topsoil nowholds favorable moisture supplies, but substantial winter precipitation will be welcome to build up depleted subsoil reserves.

Pasture Condition Favorable

Pastures for the Nation as a whole on Nov. I were among the most favorable of record--only slightly below the unusually lush conditions of a year ago.

Hay Supplies Adequate in Most Areas

The frequent rains in the Southeast, although favoring growth of grass, hampered late hay making. The supply of hay and forage available for fall and winter appears well below last year's abundant stores, but a little better than average. Supplies are adequate or better in all except the northern Great Plains and parts of the Southwest.

Record Tonnage of Feed Grains

A record-high feed grain tonnage now seems assured. Production index is 143 compared with 134 last year and the 1956-58 average of 123. Corn, the feed grain heavyweight, at 4.4 billion bushels, exceeds the previous record production by 16 percent. Oats production at about 1 billion bushels, is relatively small but large crops of sorghum and barley are produced this year--589 million bushels of sorghum and 408 million bushels of barley.

Soybean Crop Second Highest of Record

Soybean production, at 528 million bushels, is 8 percent below the record 574 million bushels

for 1958, but is the second highest of record and about three-fifths above the 10-year average. The indicated U. S. yield of 24.0 bushels per acre is 0.2 bushels below the record high of last year but is 3 bushels above average.

More Citrus Than Last Season

U. S. citrus tonnage (1959-60 season) is expected to be 8 percent above last year and 16 percent above average. More plentiful are oranges, lemons, limes, and tangelos; but fewer tangerines and grapefruit than last year. Early and midseason oranges are forecast at 68.4 million boxes, 3 percent larger than last season's production, and 12 percent above average. Grapefruit production is estimated at 41.5 million boxes about the same as a year ago. Lemons in California and Arizona, at nearly 20 million boxes, will be 15 percent greater than last year's crop.

Deciduous Fruits, Larger Tonnage

Total tonnage of deciduous fruits is 4 percent larger than last year and 8 percent above average.

Prices of Farm Products

Commodity	Average received b	Effective parity prices	
	Sept. 15 1959	Oct. 15 1959	Based on data for Oct. 1959
Basic commodities:			
Cotton, Amer. upland (lb.) ct.	33.12	32.51	37.80
Wheat (bu.) dol.	1.72	1.76	2.35

Eggs (dozen) ct.	32.8	31.6	47.1

¹ Preliminary

²Does not include incentive payment to bring season average return to 62 cents per pound.

³ Excludes tangerines, previously included.

The 1959 apple, peach, pear, and grape crops are above average, and each above last year except apples. Apple crop, forecast at 117.7 million bushels, compares with 126.6 million in 1958. Prune production, at 155,300 tons, is smaller than average, although larger than last year's short crop.

Big Rice Crop

Production of rice is estimated at 53.1 million equivalent 100-pound bags. This compares with 47 million last year and 11 percent above the 10-year average. The 3,352-pound yield per acre is a record and about a third above average.

Fall Potato Crop Smaller Than Last Year

The fall Irish potato crop is indicated at 165,-854,000 hundredweight. This is 9 percent above the average crop through 9 percent smaller than last year's production.

Total production of all Irish potatoes this year

¹ Bureau of the Census.

is indicated at 242,172,000 hundredweight, compared with 265,729,000 cwt. last year and 229,-829,000 cwt. average.

Above Average Crop of Peanuts

Peanut production, at 1,656 million pounds, is down considerably from last year's 1,836 million but is above the 1948-57 average of 1,643 million pounds. Harvesting has been delayed by rains, especially in the Southeast.

Small Crop of Flaxseed

The 21.8 million bushels of flaxseed indicated for this year is much below the 39.5 million bushels produced last year and the 39.7 million average. Yield per acre, 6.4 bushels compares with 10.3 bushels last year and the average of 8.5 bushels.

Cotton Estimated at 14.8 Million Bales

U. S. cotton crop is estimated as of Nov. 1 at 14,801,000 bales--up 109,000 bales from last month's estimate. Last year's crop was 11,512,000 and the 10-year average 14,046,000 bales.

^{*}Revised.

² Commercial; excludes farm slaughter.

³ By commercial hatcheries

Indicated yield of 474 pounds per acre is a new high, 8 pounds above the previous record reached in 1958 and compares with the 1948-57 average yield of 329 pounds.

Almost two-thirds of this year's cotton crop will be produced in 4 States: Texas, 4,570,000 bales; California, 1,950,000; Mississippi, 1,600,000; and Arkansas, 1,540,000 bales.

California Average, 2 Bales Per Acre

Measured in lint cotton per acre, California leads with an indicated average yield of about 2 bales (1,070 pounds) per harvested acre. Yield in some other States: Arizona, 960 pounds; New Mexico, 832 pounds; Missouri, 612; Tennessee, 597; Arkansas, 571; and Mississippi, 533 pounds per harvested acre. Texas, with a large acreage, has an indicated yield of 348 pounds, lowest per acre of any other State except Oklahoma's 300 pounds (for production and yield by States, see the November Cotton Report, issued by Crop Reporting Board, AMS, USDA, Washington, D. C.)

Other Crops, Nov. 1 Forecast

Sweetpotato crop is estimated at 18,140,000 hundredweight. Compares with 17,434,000 cwt. produced last year and 19,516,000 cwt. average.

Dry Beans--18,489,000 bags (100 lb, cleaned) compares with 18,981,000 produced in 1958 and the 10-year average of 16,804,000 bags.

Dry peas--4,191,000 bags (100 lb. cleaned), compared with 2,475,000

produced last year and 3,193,000 for the 10-year average.

Sugarcane (for sugar and seed)--8,182,000 tons, compared with 6,681,000 produced last year and 6,942,000 for the 10-year average.

Sugar beets--16,685,000 tons, compared with 15,183,000 last year and the 10-year average of 12,070,000 tons.

Tobacco (all types)--1,800,257,000 pounds, 4 percent above 1958 production but down from the 10-year average by 14 percent, (Flue-cured was estimated Nov. 1 at 1,080,095,000 pounds; burley, at 497,495,000 pounds; and Maryland, type 32, at 32,375,000 pounds).

Egg Output Slightly Lower in October--Aggregate Production Still Ahead of Last Year

Egg production during October was below a year earlier for the first time since May 1958. Hens laid 4.8 billion eggs in October, down 1 percent from a year earlier.

Aggregate egg production, January through October, was 3 percent above the same period of 1958.

The number of layers on Nov. 1 totaled 312 million, 2 percent less than on the same date last year.

Slightly Lower Milk Output

Milk production in October totaled 9,453 million pounds. This compared with 9,455 million a year earlier and the 10-year average for the month of 8,824 million pounds. Production January through October totaled 106,108 million pounds, down somewhat from the 106,976 million pounds produced during the same months in 1958.

Lamb Feeding About Same As Last Year

The number of sheep and lambs to be fed for the winter and early spring market is expected to be about the same as last year. The number to be fed in the Corn Belt as a whole is likely to be down slightly, but several of the Corn Belt States will feed more than they did a year earlier.

January-October Hatchery Figures

The 119.7 million broiler chicks hatched during October were down about 10 percent from a year earlier. But for the 10 months January through October there was an increase from a year earlier of about 1 percent (1,548 million, compared with 1,539 million).

All turkey poults hatched January through October totaled 85.2 million, 3 percent more than were hatched during these months in 1958. Heavy breeds hatched in the same 10 months totaled 70.2 million, compared with 69.6 million a year earlier; light breeds, 15.0 million compared with 12.9 million.

CURRENT ESTIMATES

Cash Receipts from Farm Marketings by States, September 1959¹

State	Livestock and products	Crops	Total
	1,000 dollars	1,000 dollars	1,000 dollars
Maine	9,616	4,850	14,466

¹ For historical data and explanation of indexes, see "Changes in Farm Production and Efficiency," USDA Statistical Bulletin No. 233.

Prepared jointly by Agricultural Research Service, and Agricultural Marketing Service.

Fewer Farm Workers

The 8.6 million persons at work on farms in late October were about 1 percent fewer than a year earlier. Total included 6,159 farm family workers and 2,454 hired workers.

² Payment to farmers for equivalent quantities of farm produce minus imputed value of byproducts obtained in processing.

² Indications for 1959 based on November 1959 "Crop Production" report and other releases of the Agricultural Estimates Division, AMS.

³ Includes minor livestock products not included in the separate groups shown.

⁴ Includes production of fruits and nuts and of some miscellaneous crops not in the separate groups shown.

⁵ Hay and concentrates only. Not included in farm output.

⁶ Index of crop production per acre is a ratio of total crop production to total land used for crops. It differs from the AMS index of yields per harvested acre of 28 crops.

⁷ Animal units and production exclude horses and mules.
